

LoadBreaker

Tilt Trolley Operation Instructions

When using a Loadbreaker Tilt Trolley, **ALWAYS** follow these instructions:

1. With the load centred over the shoe / toeplate and securely against the upright section, grip the trolley handle with **both** hands.

2. Depress the axle release pedal with your foot, unlocking the axle mechanism and allowing it to pivot freely.

3. Take your foot away from the axle and pull the trolley back toward yourself. Depending on the weight distribution of the load this should require little force.

4. Continue momentum until the base area of the trolley is clear of the ground and ready to wheel.

5. When finished, carefully stand the trolley upright, pushing forward until the axle mechanism locks back into the fixed position.

BE AWARE: LoadBreaker tilt trolleys should **NEVER** be tipped back or wheeled before first releasing the axle assembly!

Using your LoadBreaker tilt trolley without unlocking the axle mechanism puts undue stress & force on working parts designed to take minimal force during normal operation. Failure to follow the instructions for use listed in this operation guide, can result in significant damage to your LoadBreaker tilt trolley, damage to the load, and personal injury.
